

# PRENCIPIA CASE STUDY

## Headquarter's network move successful

Prencipia assists Estenson Logistics move their headquarters to prepare for growth

### OVERVIEW

Prencipia is a provider of cloud architecture, design, and implementation services. We allow our customers to consume infrastructure services in a manner similar to what public cloud providers offer. Our cloud service strategy allow our customers to reuse their existing IT investments in private clouds, public clouds, and hybrid cloud models.

Transportation

### PROJECT OVERVIEW

Estenson Logistics is a dedicated logistics provider to some of the most recognizable retail brands in the country. Their solutions are custom-designed to meet the most complex transportation challenges while providing the same benefits of a private fleet.

Due to shrewd business practices over the past several years, Estenson has been able to thrive and grow. Due to growth, their headquarters office became too small. They contacted Prencipia to assist them in moving their headquarters office network with minimal interruption to the operations across over 50 network locations within the US. They also took this opportunity to upgrade aging infrastructure for improved performance and network visibility.

Prencipia provided the services necessary for Estenson to successfully execute this project. The move of office networks, data center networks, and vital VOIP networks to the new location were executed with minimal downtime and work interruption.
